Instructions: Consume 20-40 drops per day or as directed by a physician. Mix with plenty of water or add to soups, smoothies, tea and water coolers.

As the world's topsoil is increasingly robbed of its functional aspects and naturally occurring minerals, this depletion impacts to our food supply. Even the USDA has put out multiple studies indicating not only the decrease in vitamins and minerals in our food supply over the last 40 years but also the lack of proper mineral content in human beings.

Minerals are the electrical wires of the human body. They are important for all chemical reactions, physical tissues, nerve/brain health, the functioning of all cells and the transmission of internal electrical impulses. Mineral imbalances can lead to sickness, dysfunction, and death.

To combat this serious issue, we have created our Vital Minerals compound which is packed with over 84 macro and micro minerals for whole body function. This formula is in an extremely digestible, biologically active, heavy metal free, and super low sodium mixture that is derived from the Great Salt Lake.
